

MULTI-SENSORYFX

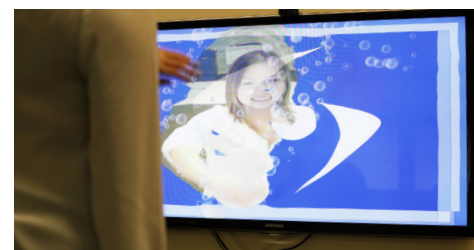

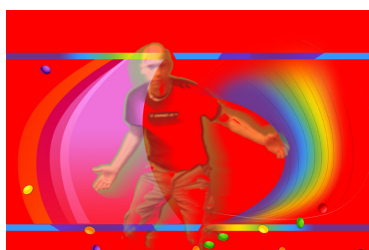

With GestureTek Health's Multi-Sensory displays, patrons can step into the wildest of dreams. The Multi-Sensory Displays are non-contact. They enable clients, regardless of ability, to interact independently and to explore their own creativity and imagination. Our patented video gesture control software makes it possible for clients to control virtual reality worlds by moving objects, changing images and creating dazzling animation effects. The durable, touch-free unit fits easily into the floor plan of most waiting rooms, wards, sensory rooms and Snoezelen® rooms.

MULTI-SENSORYFX

The unit comes with a vast library of interactive multimedia special effects, sensory experiences and virtual games for entertainment, education or therapy. Users see their live real-time video image onscreen and can interact with the virtual environments through movement. Suitable for custom installations, all hardware components are hidden from view and can be integrated into any design or décor.

The spectacular virtual reality effects come pre-installed and ready to use. They can be set to run for any time period and can be customized to deliver either relaxing ambient environments or unique exhilarating experiences for each patient and user. Additional themed packages can be purchased and custom sensory sensory themes can be ordered.

The immersive, interactive Multi-Sensory Display System can either sit on a counter top, be mounted on any wall, or even a ceiling.
